

We've been perfecting our PROVEN process since 1996.

And we're still dedicated to providing the best service and solutions physically possible so that you can be proud to have ISOCNET as your business partner.

We'll be with you every step of the way.

We follow a PROVEN process that gives us full insight into your infrastructure, allowing us to provide a detailed roadmap to success. It's called PROVEN because we believe in actual solutions and data-based results. When it comes to your needs, we treat your business like it's our own.

The ISOCNET PROVEN Process:

PERFORMANCE | REVEAL | OPERATIONAL | VALIDATE | EXECUTE | N-ABLE

P

▶ A **performance** review gives us a detailed evaluation of your current strategy, business, and infrastructure needs.

R

▶ Our team will do additional research to **reveal** underlying root causes of performance issues and identify specific requirements.

O

▶ We then build an **operational** architecture that meets all of your unique business and technical prerequisites.

V

▶ After we predict a solution, we **validate** it with a prototype to ensure that each piece will work accurately and with consistency throughout the environment.

E

▶ Once we have validated the architecture, we **execute** the blueprint of your new infrastructure.

N

▶ We utilize our **N-ABLE** system to proactively manage, monitor, and report on the overall health of your systems.
